SUMMARY

Final-year Electronics and Communication Engineering student with a strong foundation in Artificial Intelligence, Machine Learning, Deep Learning, and Software Development. Hands-on experience in building NLP, computer vision, and LLM-based application development using Python, PyTorch, and TensorFlow, with expertise in data preprocessing and model optimization.

TECHNICAL SKILLS

Programming: Python | **AI/ML:** Machine Learning, Deep Learning, NLP, Computer Vision, Generative AI, RAG, Hyperparameter Tuning, Model Optimization | **Frameworks/Libraries:** PyTorch, TensorFlow, NumPy, Pandas, OpenCV, FAISS | **Architectures/Optimization:** CNN, Transformers, ViT, AdamW

WORK EXPERIENCE

Coincent AI

AI/ML Intern

April 2024 – May 2024

- Engineered AI/ML pipelines for NLP and computer vision tasks, processing **50,000+ text samples** and **60,000 images** for classification workflows.
- Constructed an NLP text classification pipeline using **TF-IDF, feature engineering, and hyperparameter tuning**, improving model accuracy from **75% to 90%**.
- Implemented a **Vision Transformer (ViT)** for CIFAR-10 classification across **10 classes**, leveraging **data augmentation, patch encoding, and AdamW optimization** to improve model generalization.

Tech Stack: Python, TensorFlow, NumPy, Matplotlib | **Concepts:** NLP, Computer Vision, Vision Transformers (ViT), Feature Engineering, Hyperparameter Tuning

PROJECTS

Spoorthi Chatbot (AI-Powered Festival Assistant) | [Github](#) | [Live](#)

- Designed a full-stack AI chatbot for **Spoorthi 2026** to answer queries on events, schedules, venues, and workshops in real time.
- Architected a retrieval pipeline using **embeddings, semantic search, and FAISS vector search** for accurate domain-specific question answering.
- Developed an admin console with **JWT authentication** and document upload support for updating 10+ festival knowledge categories via automated redeployment.

Plant Disease Detection (CNN, Computer Vision) | [Github](#)

- Developed a CNN-based plant disease detection system for automated classification across **38 disease categories** using **17,572+ leaf images**.
- Designed and trained a **5-layer CNN architecture (32→512 filters)** with **128×128 RGB preprocessing** for robust disease feature extraction.
- Achieved **90.01% validation accuracy** by applying **dropout and data augmentation (rotation, flipping)** to reduce overfitting and improve generalization.

Breast Cancer Detection (Deep Learning, Healthcare AI) | [Github](#)

- Built an ANN-based classification system for early breast cancer detection using **30 clinical features** from diagnostic datasets.
- Applied **feature scaling and preprocessing** to improve model convergence and training stability across **30 training epochs**.
- Achieved **97.08% test accuracy** in binary classification of **malignant vs benign tumors**.

EDUCATION

Jawaharlal Technological University Hyderabad (JNTUH)

Integrated Dual Degree (B.Tech + M.Tech) in **Electronics & Communication Engineering** November 2022- May 2027
Cumulative GPA : 8.25 / 10

ADDITIONAL

CERTIFICATIONS: AI for everyone (Deep Learning ,Coursera), Python for Data Science and AI Development (IBM, Coursera), Machine Learning Specialization (Deep Learning.AI)

AWARDS/ACTIVITIES: Competed in Smart India Hackathon 2024&2025, Competed in MSME Idea Hackathon 4.0 (got selected to 2nd level),2nd Prize, E-Papyrus Event – Spoorthi National Symposium (Group Presentation) , Attended 5-Day Gen AI Workshop – Kaggle
